

CIRBI Release Highlights

Version 2026.9

Released July 22, 2026

This document includes high-level information about key changes in this release. Note that this is not a comprehensive list of all changes made in the release; instead, we've focused on new features that are available and other changes that might impact users.

In this release, we've introduced the following changes:

Submission Actions

Phone Number Fallback Logic

In the Edit Contact and Notifications and Edit Site Contacts activities, we've implemented fallback logic for phone numbers: If the Phone Number field in your profile is populated, that value is displayed in these activities. If the Phone Number field in your profile is blank but Office Phone Number is populated, that value is displayed in these activities instead. (CRB-28955)

Provide Sponsor/CRO Sign-off Permission

We've refined access to the Provide Sponsor/CRO Sign-off activity so that only users who have permission to edit the corresponding protocol submission can access and submit this activity at both the protocol and site/secondary submission levels. (CRB-28960)

Submission Forms

Sub-Investigator Correction Error

We've fixed an issue that prevented users from being able to save or submit the Investigational/Research Locations and Subject Recruitment (for single-site protocols) or Investigator and Administrative Personnel (for site submissions) submission form when they initially indicated they wanted to submit sub-investigator information but later opted not to. (CRB-28910)

Research Location Error

For single-site protocol and site submissions, we fixed an issue that caused the Multiple Investigational/Research Locations Questions submission form to be displayed and required if the list of research locations in the Investigational/Research Locations and Subject Recruitment submission form contained two research locations with identical attributes, but only one was selected. (CRB-29240)
